

Suryakant Goswami

suryagirig24@gmail.com

Objective

Motivated and adaptable fresher and a willingness to take on IT and non-IT roles. Ready to grow and take on new challenges.

Education

- Certification, full stack development using MERN, Naresh I Technologies, Hyderabad **2023-24**
- Master of Computer Application, Kalinga University, Raipur (C.G.) **2021-23**
CGPA-7.11
- Bachelor's degree in Computer Applications, Atal Bihari Vajpayee University, Bilaspur (C.G.) **2018-21**
Percent-66.47%

Skills

Technical skills: C++, JavaScript, HTML, CSS, Tailwind CSS, React, Redux, Node.js, Express.js, MongoDB, REST API, Auth0, Axios, JWT, Git, GitHub, Visual Studio Code, Postman, Cloudinary, Object-Oriented Programming (OOP)

Soft skills: problem solving , adaptability, team work

Projects

Project 1 : Real time ephemeral chat ([GitHub](#))

- implement chat room for group conversation using group-id
- all chats and joined rooms are vanished after closing the browser tab
- integrated socket.io for real time communication
- created a responsive design using react and tailwind for seamless user experience across devices.
- Implement encryption using JWT
- created robust backend using node and express js

Project 2 : Quick video call ([GitHub](#))

- Implemented peer-to-peer video and audio communication using WebRTC APIs.
- Created signaling server using socket.io node and express for session negotiation and call setup.
- Created basic functionality for User to mute the Audio, Video as well as cut the call
- Established direct connections between users without the need for a centralized server for media streaming.
- Its only work on local network users

Project 3 : Sudoku solver ([GitHub](#))

- implemented real-time validation and highlighting of incorrect entries to enhance user experience with responsive design using html CSS and JS
- Implemented the backtracking algorithm in JavaScript to solve sudoku
- created a user-friendly interface to allow the users to input Sudoku puzzles

Project 4 : multiplayer real time typing ([GitHub](#))

- Players can participate in solo typing sessions to measure their typing speed (WPM), accuracy, and completion time.
- Allows players to join rooms with 3–4 users and compete in real time
- Random typing challenges are generated dynamically using **FakerAPI.it** for a fresh experience
- Unique profile avatars are assigned to each player using **Multiaavatar API**.
- A live leaderboard of players for enhancing the competitive experience
